### TECHNICAL EXPERIENCE

#### Academic Projects

- **Smart Safety Band for Children Using Raspberry Pi** (Aug 2019-May 2020, Team Size: 2 members):  
This project was based on IoT platform using the raspberry pi for increasing the safety of children and enhancing the awareness of parents to understand their children in a better way. With the help of this project, we developed a prototype to enhance the security. Individual Role – Played a key role in developing connection between smart safety bands and raspberry pi using microprocessor programming.
- **RFID Based Attendance System** (Nov 2018- Apr 2019, Team Size: 2 members):  
This proposed attendance system uses RFID technology, and each student is issued with an RFID tag and the controlling unit is in the organization and the attendance is marked by placing the card near the RFID reader. This avoids the use of any malpractice and provides efficient and organized data. Individual Role – Acted as a project manager, gathering requirements, developing schedules and technical writing the project.

#### Languages and Technologies

- Tools & Technologies: Git, Jira
- Languages: SQL, JAVA(beginner), C, C++,Python
